Inventory

One of the main topics in discussions about real estate has been the decline in inventory. In fact, as the next chart demonstrates, in Swampscott the decline has been steady over the last decade.

While sales have declined somewhat in recent years, the drop has been lower than the fall in inventory, suggesting that nearly as many houses are being sold – but much more quickly, meaning there are fewer available for sale at any time. But with inventory so low, will this change in 2022?

Mortgage rates

While I have been writing since March 2021 about the risk that the Federal Reserve’s continued pumping of massive amounts of cash into a rapidly recovering economy would trigger renewed inflation, for a long time markets believed that the Fed would not significantly change its policy.

That belief changed dramatically at the end of 2021 when the Fed acknowledged that it needed to raise interest rates significantly. Markets reacted and the yield on the 10-year Treasury – the benchmark used in calculating mortgage rates – soared from around 1.5% in late 2021 to nearly 3% currently, driving the 30-year Fixed Rate Mortgage to 5%, the highest in a decade.
